

Loss of a second factor

The following procedure may be used when a user needs to access a protected application, but doesn't have his second authentication factor available:

- The user may enter its login/password on `https://mydomain.trustelem.com`.
- Instead of activating the usual second factor, he/she selects « **Use an alternative method** ».
- The user may then ask a rescue code:
 - He has to click on « **Ask for a rescue code** ».
 - All administrators receive an email alerting that a rescue code is requested by a user.
 - One of the admins has to click on « **Rescue code** » in the « **Alerts** » tab of the Trustelem admin dashboard.
 - This code can be transmitted to the user, after having properly checked the user's identity.
 - The user has **24h** to use this one-time rescue code.
