# Regular expressions

Some fields on the Trustelem administration pages allow the usage of regular expressions.

- In **redirect_uri**, for indicating multiple possible values
  For example, the following code allows a URL with an optional port number and trailing:

```
regexp+http://localhost(:(\d)+)?/
```

- In the applications **scripts**, for modifying the returned attributes
  For example, the following code changes the domain name in email addresses:

```
return user.email.replace(/([^@])@./, '$1@mondomaine.io');
```
