

AppDynamics

AppDynamics Configuration

- Log into your AppDynamics admin session, go to Administration and then to the Authentication Providers tab
- Select the SAML option and fill the following fields:

- Login URL

```
https://mydomain.trustelem.com/app/33XXXX/sso
```

- Logout URL

```
https://mydomain.trustelem.com/app/33XXXX/on_logout
```

- Identity Provider Certificate

```
https://mydomain.trustelem.com/app/33XXXX/metadata
```

- Username Attribute

```
username
```

- Display Name Attribute

```
displayname
```

- Email Attribute

```
email
```

- By default the username will be the user email but you can change that in Custom scripting ; if you want username to be firstname.lastname for example add these two lines:

```
function CustomSAMLResponse(msg: SAMLResponse, user: User, groups: Groups, deny: Deny): void {  
    msg.setAttr("username", user.firstname+"."+user.lastname);  
}
```

- You can also define AppDynamics roles according to attributes sent by Trustelem in SAML Group Mappings
 - In SAML Group Attribute Name write 'groups'
 - In Group Attribute Value, check the Multiple Nested Group Values option

- In Mapping of Group to Roles add Trustelem groups to which you want to match AppDynamics roles

Trustelem Configuration

- On Trustelem, write your AppDynamics name account in the corresponding field. You can find your name account on your AppDynamics url which looks like `https://[name-account].saas.appdynamics.com/`
- To send your users' Trustelem groups, add these lines in Custom scripting:

```
function CustomSAMLResponse(msg: SAMLResponse, user: User, groups: Groups, deny: Deny): void {  
    for (let g in groups) {  
        msg.addAttr("groups", groups[g].name);  
    };  
}
```
