Olfeo SaaS

- Go to your **Olfeo saas** subscription
- In **Configuration** > **Directory**, make sure you have added a directory via Active Directory or Azure AD
  - See the Olfeo startup guide
- Note the attribute used as the user identifier: userPrincipalName, sAMAccountName, or email
- Edit your directory, then click **Authentication**.
- Choose the **SAML** authentication method
- Copy the **Entity Identifier** value into the **EntityID** field of the Trustelem application
- Copy the **Response URL** value into the **Assertion Consumer Service** field of the Trustelem application
- Copy the **Connection URL** value into the specific **login URL** field of the Trustelem application
- In the field **NameID Attribute** of the Trustelem application, enter the value corresponding of the user identifier noted earlier
- Download the **Trustelem metadata file**
- In Olfeo saas, import the content of the downloaded file into the Supplier Metadata field
